SUMMARY

Full-stack developer experienced in building and deploying applications with React.js, Node.js, Express.js, and PostgreSQL. Skilled in REST API development and cloud deployment using AWS, Vercel, Render, and Docker; currently building a multi-tenant Local Commerce Platform.

EDUCATION

B.E. in Computer Engineering (Pursuing) — St. John Institute of Technology and Management

2024 – 2027

Diploma in Computer Engineering — Pravin Patil Polytechnic College

2021 – 2024 | Aggregate: 83.09%

SSC — Rajguru H.M. Pandit Vidyalaya, Saphale

2020 – 2021 | 79.43%

TECHNICAL SKILLS

Frontend: React.js, JavaScript, Redux, HTML, CSS

Backend: Node.js, Express.js, REST API Development

Programming Languages: JavaScript, Python, Java, C, C++, SQL

Databases: PostgreSQL, MySQL

Cloud & Deployment: AWS (EC2, RDS, S3, IAM), Docker, Vercel, Render, Git, GitHub

Tools: Postman, VS Code, Claude Code, Google Antigravity

PROJECTS

AI-Based Food Nutrition Estimator (GitHub | Live Demo)

React.js · Python · TensorFlow · MySQL · AWS (EC2, RDS, S3, IAM) · Docker

- Developed a cloud-based full-stack application that analyzes user-uploaded food images using a CNN/transfer-learning approach to estimate calories and nutritional information.
- Built RESTful APIs to connect the React frontend with a Python/TensorFlow AI service and manage application data through MySQL.
- Deployed the React frontend on Vercel and backend/AI services on AWS EC2, with MySQL hosted on AWS RDS and food images stored in Amazon S3.
- Containerized the Python AI service with Docker and configured AWS IAM-based access controls for cloud resources.

LocalCommerce — Multi-Tenant Local Commerce Platform (GitHub | Live Demo)

React.js · Node.js · Express.js · PostgreSQL · REST APIs · Vercel · Render

- Built a multi-tenant local commerce platform with separate Customer, Business, Delivery, and Admin experiences for independent local businesses, deployed with the frontend on Vercel and backend/database on Render.
- Designed store-scoped management for products, inventory, orders, customers, staff, fulfillment, discounts, analytics, and reviews, with role-based access and pickup/local-delivery workflows.
- Architected a global product and store-specific listing model enabling cross-store product discovery while preserving independent pricing, inventory, and fulfillment rules.
- Built a Node.js/Express REST API with PostgreSQL and JWT-based authentication for catalog, ordering, and multi-tenant data management.
